Summary

Machine Learning Engineer with hands-on experience building machine learning, deep learning, NLP, computer vision, and Generative AI applications. Experienced in Python, PyTorch, Scikit-learn, Transformers, LangChain, REST APIs, Docker, PostgreSQL, and backend engineering. Strong foundation in model development, data preprocessing, model evaluation, software engineering, and algorithmic problem solving, with a focus on building end-to-end AI systems.

Education

Amity University

Master of Computer Applications – Artificial Intelligence & Machine Learning

July 2024 – Expected July 2026

Noida, Uttar Pradesh

Dev Bhoomi Uttarakhand University

Bachelor of Computer Applications

Sep 2021 – June 2024

Dehradun, Uttarakhand

CGPA: 9.02/10

Technical Skills

Programming: Python, Java, JavaScript, SQL

Machine Learning: Supervised Learning, Unsupervised Learning, Classification, Regression, Feature Engineering, Model Evaluation, Hyperparameter Optimization

Deep Learning: PyTorch, TensorFlow, Keras, CNNs, Transformers, Attention Mechanisms, Transfer Learning

NLP & Generative AI: NLP, Large Language Models, LangChain, RAG, Embeddings, Prompt Engineering, BPE Tokenization

Data & Computer Vision: NumPy, Pandas, Scikit-learn, OpenCV, NLTK, Data Preprocessing, Exploratory Data Analysis

ML Engineering: REST APIs, Docker, Git, PostgreSQL, GraphQL, Linux, System Design

Experience

AppFoster

Aug 2026 – Present

Associate Software Engineer Intern — ReactJs, NodeJs, Go

- Contributed to a website monitoring platform for CMS and eCommerce applications, monitoring website health, APIs, SSL certificates, and performance metrics.
- Implemented and integrated API-driven monitoring workflows and real-time alerting across email, Slack, SMS, and webhooks.
- Debugged backend and frontend issues, integrated REST APIs, tested monitoring workflows, and improved incident tracking across Shopify, WordPress, CraftCMS, and Strapi.

HackerRank

Sep 2025 – Dec 2025

Software Engineer Intern

- Developed full-stack applications using React and Spring Boot with RESTful API integration and PostgreSQL.
- Implemented JWT-based authentication and authorization to secure application workflows and user data.
- Optimized backend services and PostgreSQL queries to improve API responsiveness and application performance.

Projects

Sprint Readiness Generator | AI/ML, React, Python

[Link](#)

- Built an AI-powered sprint readiness platform that analyzes task completion and generates team readiness scores using customizable readiness rules.
- Developed a Python-based task analysis pipeline to classify sprint tasks as completed, incomplete, or pending and generate readiness insights.
- Integrated the analysis pipeline with a React dashboard, enabling real-time task filtering, custom readiness criteria, and sprint progress monitoring.

Flood Rescue System | NLP, Machine Learning, React, Python

[Link](#)

- Built an AI-powered disaster response platform that classified flood-related tweets and identified genuine rescue requests with 88% classification accuracy.
- Developed an NLP pipeline using Logistic Regression to detect spam, prioritize emergency requests, and automate rescue verification.
- Integrated the trained model with a React-based dashboard that enabled NGOs to visualize verified rescue requests in real time.

GPT-Style Next Word Predictor | PyTorch, Transformers, LLM

[Link](#)

- Implemented a complete GPT-style Transformer architecture from scratch, including causal multi-head self-attention, positional embeddings, residual connections, and layer normalization.
- Built a Byte Pair Encoding (BPE) tokenization pipeline and optimized transformer training, achieving approximately a 65% reduction in cross-entropy loss over 60 epochs.
- Gained hands-on experience with autoregressive language modeling, attention mechanisms, transformer optimization, and modern LLM workflows.

KabaadKart – Service Management Platform | React, Spring Boot, PostgreSQL, REST APIs

[Link](#)

- Built a full-stack service management platform enabling order creation, service request tracking, and user management.
- Developed secure REST APIs supporting complete CRUD operations using Spring Boot and PostgreSQL.
- Designed reusable React components and modular backend architecture to improve maintainability and scalability.

- Integrated PostgreSQL with JPA/Hibernate to provide reliable relational data storage and efficient database operations.

Achievements & Certifications

- Solved 1,000+ algorithmic programming problems across LeetCode and HackerRank.
- Finalist – Challenge 3.0 National Hackathon.
- Semifinalist – Navdhara Hackathon.
- HackerRank Problem Solving (Intermediate) Certified.
- Machine Learning & Deep Learning Specialization – GeeksforGeeks.
- Mathematical Foundations of Machine Learning – Udemy.
- Deloitte Technology Job Simulation – 2025.
- HackerRank Internship Certificate – 2025.
